

VINAY KUMAR

Android & Flutter Developer

+91-8953852101 · vk222992@gmail.com · Gurugram, India · [LinkedIn](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Android & Flutter Developer with 3+ years of experience building and delivering production-grade mobile applications from concept to Play Store. Expertise in Flutter, Android (Java/Kotlin), MVVM, BLoC, Firebase, and REST APIs with a focus on scalable, maintainable architecture. Specialized in enterprise mobility solutions — HHT scanning (Zebra EMDK, DataWedge, Honeywell, Newland NLS SDK), Bluetooth printing (ESC/POS, ZPL), and ERP integration. Proven ability to own features end-to-end, collaborate with cross-functional teams, and ship reliable applications across logistics, warehouse management, and enterprise platforms.

TECHNICAL SKILLS

Mobile Development	Android (Java, Kotlin), Flutter, Dart, Cross-Platform Development
Architecture	MVVM, BLoC, Provider, Repository Pattern, Clean Architecture, SDLC
Backend & APIs	REST APIs, Firebase (Auth, Realtime DB, Analytics), Webhooks, Push Notifications
Enterprise / HHT	Zebra EMDK, DataWedge, Honeywell SDK, Newland NLS SDK, Cipherlab
Hardware & Printing	Bluetooth Communication, ESC/POS, ZPL, Barcode / QR Scanning, ML Kit
Data Storage	Room Database, SQLite, Shared Preferences, Offline-First Architecture
Tools	Git, Postman, Android Studio, Play Store Deployment

WORK EXPERIENCE

Android Developer

Sat Kabir Logistics – Gurugram, India | Apr 2026 – Present

- Developing an ERP Android application for precast industry workflows, integrated with Newland HHT devices using NLS SDK — handling barcode scanning, data capture, and real-time sync.
- Building a full-cycle WMS (Warehouse Management System) in Flutter covering inward, sorting, grading, picklist, shipment, and returns — serving 2–3 enterprise clients daily.
- Architected MVVM + Repository pattern with clean code principles, reducing feature development time by 30%.
- Integrated RESTful APIs for real-time data sync, scan persistence, and multi-module communication across ERP and WMS.
- Optimized app performance on Android and HHT devices — low memory footprint, fast scan response, and offline-first capability using Room and SQLite.

Tech Stack: Android, Flutter, Dart, Kotlin, Java, MVVM, Room/SQLite, REST APIs, NLS SDK, Newland HHT, Git

Software Developer (Android & Flutter)

Seabird Logisolutions Pvt. Ltd. – India | Jul 2023 – Apr 2026

- Engineered and deployed 7 production-ready Android and Flutter applications used daily by 50–200 field staff and enterprise clients across logistics and warehouse operations.
- Built HHT-based barcode and QR code scanning workflows using Zebra EMDK, DataWedge, and ML Kit — reducing manual shipment verification time by 25–50%.
- Architected MVVM-based applications using Flutter (Provider, BLoC) and native Android (Java/Kotlin) for scalable, maintainable codebases.
- Implemented Bluetooth printing with multi-printer support (ESC/POS, ZPL) across Zebra and Honeywell HHT devices.
- Built Proof of Delivery (POD) module with image capture and real-time REST API synchronization.
- Integrated Firebase for authentication, real-time data sync, push notifications, and analytics.
- Collaborated with cross-functional teams to own features end-to-end from design through Play Store deployment.

Tech Stack: Android, Flutter, Dart, Java, Kotlin, MVVM, BLoC, Provider, Firebase, REST APIs, Zebra EMDK, DataWedge, Honeywell SDK, Bluetooth Printing, ML Kit, Room/SQLite, Git

KEY PROJECTS

WMS Vendor Portal

Seabird Logisolutions

- Built a WMS Vendor Portal using Flutter & Dart for vendor and warehouse operations, actively used in large-scale industrial logistics including Vantara operations.
- Implemented secure vendor login with role-based access and personalized dashboards for real-time operations overview.

- Built PO (Purchase Order) creation, management, and tracking module with real-time status monitoring.
- Developed Challan creation, generation, and management — including invoice generation and document workflows.
- Implemented product management module for inventory visibility and goods movement tracking.
- App supports daily goods movement workflows — PO approvals, challan generation, and invoice dispatch end-to-end.

Tech Stack: Flutter, Dart, REST APIs, Material Design, Provider

WMS-GNOSIS (Warehouse Management System)

Seabird Logisolutions

- Developed a scalable WMS deployed across 3 warehouses, running on smartphones, Honeywell HHT, and Zebra HHT devices — including Vantara operations.
- Built cross-platform support for Android smartphones and HHT devices using Flutter with native Java bridge integration.
- Implemented ML Kit-based crate scanning for intelligent barcode automation — achieving 95% scan accuracy rate.
- Integrated Bluetooth printing (ESC/POS) via native Java bridge for improved printer stability — handling 1,000+ label prints daily.
- Built modules for crate management, shipment loading management, and real-time warehouse tracking.
- Handles 500+ daily scan operations, 20+ vehicle dispatches daily, and 10+ tons of material movement per day.
- Achieved 70% reduction in manual data entry through intelligent scan workflows and real-time API sync.

Tech Stack: Flutter, Dart, Java, Provider, MVVM, ZPL, EMDK, ESC/POS, Zebra SDK, Honeywell SDK

SLL-Ticketing (Internal Support Ticket App)

Seabird Logisolutions

- Developed a Flutter-based internal support ticket management application published on Google Play Store.
- Implemented secure login authentication, interactive dashboards with analytics, and full CRUD operations for ticket lifecycle management.
- Applied MVVM architecture for scalable state management and integrated RESTful APIs for backend communication.

Tech Stack: Flutter, Dart, MVVM, REST APIs, Firebase

SLL-VMS (Visitor Management System)

Seabird Logisolutions

- Developed a visitor management application to capture and manage visitor data with intuitive UI components.
- Designed seamless API integration for robust data handling; collaborated with cross-functional teams to optimize usability.
- Published and maintained on Google Play Store.

Tech Stack: Android, Java, REST APIs, Material Design

Seabird-EMS (Expense Management System)

Seabird Logisolutions

- Developed an expense tracking application with real-time workflows to streamline expense management processes.
- Implemented responsive UI for enterprise users with seamless REST API integration for enhanced data connectivity.
- Published on Google Play Store.

Tech Stack: Android, Java, REST APIs, Firebase

EDUCATION

Bachelor of Computer Applications (BCA)	2021 – 2024
Invertis University, Bareilly	
12th – CBSE (English)	2021
CBSE Board Marks: 88%
